

Differences between rank of weighted score and rank of journal citations

The difference was calculated as the rank of a modified Sisk et al. weighted score minus the rank of the citation count. Average ranks were assigned for ties, so some ranks are fractional. A positive value indicates that a school's primary law journal ranked more favorably in citations than in the scholarly productivity of its faculty, as measured by the Sisk et al. weighted score. A negative value indicates the opposite.

To facilitate interpretation of the difference scores, the first column in each list contains the ranks of the schools' weighted scores. They differ somewhat from ranks reported by Leiter and by Sisk et al. because of use of average ranks, because different ranks were assigned for small differences in weighted scores, and because California-Irvine was excluded because of lack of journal data.

Positive values			Negative values		
(More journal citations than faculty scholarship)			(More faculty scholarship than journal citations)		
Sisk Weighted score rank	School	Difference score	Sisk Weighted score rank	School	Difference score
48	Fordham	38	29	George Mason	-37
49.5	William & Mary	29.5	22	Florida State	-32
