

The following table is based on table 2 of Gregory Sisk *et alia*'s study, "Scholarly Impact of Law School Faculties: Extending the Leiter Rankings to the Top 70." It lists the schools in order of the difference between their mean and median scores (mean minus median), which is displayed in the last column. The mean of each school is larger than its median, indicating that the distribution for this index is positively skewed. The difference between means and medians differs greatly from 4 to 198. The index correlates .85 (Spearman's rho = .59) with the Scholarly Impact weighted score.
